

Dry Fabric Cleaner

Comes ready to use for hand cleaning or with a solvent approved upholstery extractor. Does not contain environmentally hazardous chlorinated solvents. Very versatile product, does not have a typical dry cleaning fluid odour.

Balanced evaporation cycle

Dry Fabric Cleaner's selected solvents provide efficient cleaning with a balanced evaporation cycle, resulting in reduced chance of increasing flammability. The result is greater safety during the drying process.

Hand or machine cleaning

With a higher flash point (160°), Dry Fabric Cleaner offers greater safety when used in conjunction with traditional hand or specifically designed upholstery, drapery, or clothing dry cleaning equipment. The result is increased safety for cleaning personnel and decreased chance of unwanted injury by fire.

What Does It Do?

Cleaning 'dry clean only' fabrics

Dry Fabric Cleaner was developed to efficiently clean fabrics which cannot be cleaned using traditional wet cleaning methods for upholstery, drapery or clothing.

Special formulation

The special formulation of selected solvents has given Dry Fabric Cleaner the ability to remove a wide variety of fabric soils no single dry solvent can. The result is an "across the board" cleaning ability to efficiently bring soiled fabrics back to a high appearance level.

ALWAYS pre test areas to be treated

Dry Fabric Cleaner Characteristics

pH @ use: n/a

Coverage: n/a

Dilution: Ready to use

Appearance: Clear Liquid

Fragrance: Mild solvent

Packaging: Case 4 x 5 Ltr
