

Liqua-Gel

Natural solvent gel spotter, sits on the surface of stain to avoid causing damage to backings when properly used. Removes tar, grease, ink, gum, glues, oils adhesives and other oil based spots from fabrics and hard surfaces.

Solids

Remove solids with a Chemspec spotting spatula before applying gel.

Directions for use

1. Pre-test in an inconspicuous area for colourfastness.
2. Agitate area with a rigid spotting spatula to remove any excess build-up.
3. Apply Liqua-Gel to the spot, covering it completely. Allow time to penetrate. Product will gel on contact.
4. Mark each spot with a wet floor sign or other device to avoid traffic on the area and to act as a reminder of each location.
5. After allowing Liqua-Gel time to break down the spot, remove the Liqua-Gel, then blot with a wet cloth or extract.
6. Vacuuming is recommended after carpet is completely dry or if any powdery residue remains from leaving a residue in the fibres i.e. not rinsing effectively.

What Does It Do?

Does not penetrate - no delamination

Product is a liquid that turns into a gel on shaking. Its special gelling capability keeps Liqua-Gel from being absorbed through the carpeting and delaminating carpet backing.

Increases productivity

With traditional liquid solvents, it is a long, drawn out process of blotting to safely remove solvent soluble spots. Not with Liqua-Gel, there's no need to go through the tedious blot-blot-blot procedure. Just follow the simple, time-saving steps.

Woolsafe

Tested by Woolsafe as being safe for use on wool carpet fibres.

ALWAYS pre test areas to be treated
