

Cotton Upholstery Cleaner Powder

Non-ionic, low foaming detergent for cleaning natural fibre fabrics with extraction machine, prevents cellulosic browning in Haitian or natural cotton.

Mix 4 ounces (3 ½ level measuring scoops) of the product in 4 litres of warm water (raw or Haitian cottons) or 4 scoops to 19 litres of water (normal less water sensitive cottons).

Test fabric for colourfastness or dye colour change in an inconspicuous area.

Lightly pre-spray heavily soiled areas with a low water content pre-spray, such as Heavy Duty Soil Lifter undiluted if desired.

Clean soiled area using normal, industry accepted upholstery cleaning techniques for portable extraction equipment allowing the vacuum system to lift the fabric and circulate air through it.

What Does It Do?

Maximum cleaning power

Field tested by professional cleaners in order to assure product cleaning ability before it was brought to market. The result is professional cleaner approval of the cleaning results. Evaluate for yourself.

Minimal cleaning after browning

Excessive amounts of water used to traditionally clean Haitian and natural cotton fabrics have always caused excessive amounts of browning. The unique formulation of Cotton Upholstery Cleaner Powder minimizes the chance of browning when used according to directions thus providing efficient one step cleaning.

ALWAYS pre test areas to be treated

Powdered Cotton Upholstery Cleaner Characteristics

pH @ use: 6.0 - 6.5

Coverage: Variable depending on application
