

Urine Contamination Treatment

An anionic aldehyde solvent system. Deodoriser, developed specially for the neutralisation and deodorising of urine contaminated carpets, upholstery and hard surfaces.

General directions for use

1. The first step is to determine the location of the urine contamination. This is best done with an ultra violet lamp (black light), as the urine spot will glow. A moisture detector may also be used.
2. Saturate each urine spot with Urine Contamination Treatment
3. Clean carpet using standard hot water extraction techniques.

What Does It Do?

Most effective

Urine Contamination Treatment is the most effective chemistry available today for neutralising even the most severe urine problems.

Removes odours on hard surfaces

In addition to carpet and upholstery, Urine Contamination Treatment™ will control urine odours from tiles, concrete, wood floors, as well as other hard surfaces.

Holds down odours

If recontamination is regularly occurring, treat area with Urine Contamination Treatment and leave in carpet until such time as product and urine can be extracted out. This will effectively contain and hold back any odour.

ALWAYS pre test areas to be treated

Urine Contamination Treatment

Characteristics

- pH @ use: 6.5 - 7.5
- Coverage: Variable
- Dilution: RTU / Ready to use
- Appearance: Clear Yellow Liquid
- Fragrance: Floral
- Packaging: Case 12 x 0.946L
