

Stainshield Professional

StainShield is a superior water-based protectant that can be applied to virtually any type of water-cleanable carpet, rug or upholstery.

Fabrics

On damp or dry fabrics apply textile rinse at a dilution of 20:1 before applying Stainshield using a dedicated uncontaminated sprayer with a 8004 tip for carpet and 8001 tip for upholstery. Spray evenly, allowing for overlap in coverage.

Carpets

20oz - apply 5L ready to use over 50 sq M (low profile).

40oz - apply 5L ready to use over 25 sq M (Axminster)

80oz - apply 5L ready to use over 12½ sq M (shag pile).

Upholstery

Apply 2L of on ready to use over 7 sq M of fabric (approx. 2 seater settee and 2 chairs). Always finish by brushing into the pile using a dedicated clean brush.

Drying time

1 hour longer than cleaning.

Curing time

approx. 12-24 hours.

What Does It Do?

Newer for longer

Areas treated will stay looking newer, remain cleaner longer, and resist stains. Repels oil- and water-based soils and protects carpet fibres from dry particulate damage.

Keeps costs low

Featuring a low dilution ratio compared to other protectors on the market to keep costs low, StainShield saves you money. Carpet protection is the easiest and most profitable upsell for a residential cleaning job.

A protective finish that lasts

Excellent wear and abrasion resistance ensures the product will withstand normal household and commercial wear. Protector may be reapplied to the main traffic areas as part of a good maintenance programme.

ALWAYS pre test areas to be treated

Stainshield Professional Characteristics

pH @ use: 6.5 - 7.5

Coverage: Upto 100 sq M

Dilution: Variable

Appearance: Opaque Liquid

Fragrance: Characteristic of a polymer

Packaging: Case 4 x 3.78L
