

# Liquid Defoamer

This extra concentrated defoamer clings to metals for maximum defoaming capability. 30 ml defoams up to 20 L of ready to use shampoo. Each case comes equipped with a trigger sprayer for easier use.

## Directions for use

1. Shake product well.
2. Vacuum 300-360ml of product through the vacuum hose into the recovery tank for each 95L of tank capacity. Use more defoamer if desired for increased defoaming ability.  
**NOTE:** With foam extraction equipment, Concentrated Liquid Defoamer is sprayed directly into the recovery tank.
3. Repeat above procedure after each emptying of the recovery tank.

## Important consideration

All liquid defoamers are designed to prevent foaming. If a bucket has been exposed to a defoamer, thoroughly clean the bucket before mixing carpet shampoos, upholstery shampoos or any cleaning agent requiring a "foaming action". Liquid defoamer residues will inhibit the foaming action and therefore reduce the effectiveness of the cleaning agent.

## What Does It Do?

### Stops foam build-up

Eliminates the nuisance of foam build-up in the recovery tank of ALL carpet and upholstery portable and truck mount jet extraction, foam, rotary extraction or wet vacuum pickup equipment.

### Laboratory tested

Laboratory tests prove Chemspec Liquid Defoamer is superior in defoaming ability when compared to other liquid defoamers on the market.

### Multi-machine usage

Liquid Defoamer is designed for use in the vacuum recovery systems of portable and truck mounted jet extraction and foam generating carpet and upholstery machines and has been specially designed to combat "swirling foam" found in rotary extraction and wet vacuum pickup systems.

**ALWAYS pre test areas to be treated**

### Liquid Defoamer Concentrate Characteristics

pH @ use: 7.0 - 8.0

Coverage: Upto 1000 Ltr recovery

Dilution: Ready to Use

Appearance: Thick opaque white liquid

Fragrance: Mild

Packaging: Case 4 x 3.78 Ltr
